**Carrier-grade Wi-Fi hotspots** will grow from **14%** in **2014** to **72%** by **2018**  
(from total Wi-Fi hotspots)

**MSO's lead the carrier-grade trend** as they see **Wi-Fi** as their **prime wireless strategy**

(for better positioning in MVNO's deals, quad play offering, and wireless services – e.g. TV-anywhere)

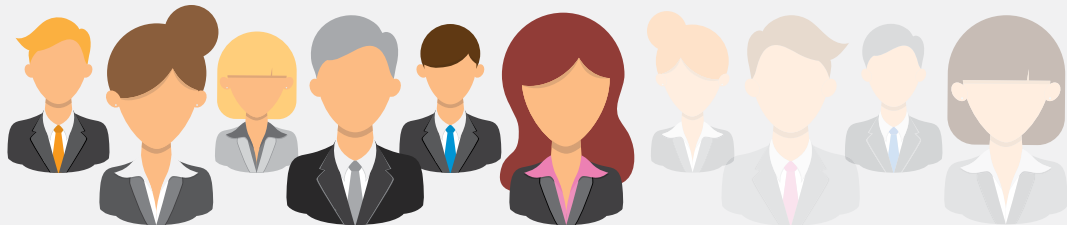

**MSO's** are also **planning massive investment in "homespots"**

**77%** of them plan to use **homespots** as part of their **Wi-Fi NW** by **2016** from approx. **30%** today

**60%** of **operators** stated that they need **better planning tools** for rolling out **carrier-grade Wi-Fi**

**Amdocs Network Rollout Solution enables Wi-Fi rollout which can support the move to carrier-grade Wi-Fi**
